Tarantella Partner Launches Canadian Web-Enabling Initiative

Gold-Tech Penetrates Canadian Market for Tarantella Web-enabling Solutions

SANTA CRUZ, Calif., March 19 /PRNewswire/ -- Tarantella Inc., a wholly owned subsidiary of The Santa Cruz Operation, Inc. (Nasdaq: [SCOC](#) - [news](#)), today announced an agreement with systems integrator Gold-Tech to offer Tarantella Enterprise 3 web-enabling software to Canadian enterprise customers. The agreement delivers this cutting edge solution to an expanding market by leveraging Montreal-based Gold-Tech's understanding of the Canadian market.

Tarantella has quickly become a major force in both enterprise computing and e-commerce, providing state-of-the-art solutions that expand the reach of what is

accessible through a web browser. Tarantella Enterprise 3 software web-enables Windows, web-based, Linux mainframe and UNIX applications, allowing remote users anywhere to securely access vital information. The user accesses applications through a "webtop" that is easy to deploy and simple to use, and secure since the system administrator retains control over what end-users are able to access. Tarantella software is suitable for use large enterprises and Application Service Providers (ASPs) who want to deliver applications to their users over the Internet.

"The Canadian market is a key component of our global growth plans," said Edmundo Costa, vice president of world wide channel sales for Tarantella, Inc. "Gold-Tech is an ideal partner for taking our technology to enterprises and ASPs. Their expertise and depth of knowledge of the Internet, have already helped major clients streamline their operations, save time, and realize substantial cost savings."

Gartner Group predicts that webtop technology will reach mainstream status by 2002. Gold-Tech was one of the earliest Canadian integrators to recognize the potential of the webtop and the Tarantella enabling technology. Gold-Tech has implemented Tarantella Enterprise 3 in several major projects, including a major integration project for Nortel. "We gave Nortel Networks an easy way to deploy shop floor applications, and to keep those applications up to date on a real-time basis," said Jean-Pierre Gendreau, Director of Gold-Tech's Tarantella Division.

Regardless of whether the customer is large or small, Gold-Tech uses Tarantella Enterprise 3 to bring value to the table. "The biggest advantage is to help our customers grow their businesses. Not just to achieve a better network, but to answer their needs," said Gendreau. "I've been in the technology field for fifteen years, and I've switched over completely to Tarantella Enterprise products. Although I still use several complementary products, I put almost all my time into the Tarantella solution, because I truly think that it's the best solution customers can find on the market today."

About Tarantella, Inc.

Tarantella, Inc., a wholly owned subsidiary of The Santa Cruz Operation, Inc., provides web-enabling software technologies that connect clients, server-based applications, and networks.
